

Our Carbon Footprint Commitment.

At DHH Panel Products, we are deeply committed to reducing our carbon footprint and making a positive impact on the environment. As part of this commitment, we have recently conducted a comprehensive analysis of our own carbon emissions. This process has allowed us to gain a clear understanding of our environmental impact across various aspects of our operations, from energy consumption and transportation to waste management and supply chain practices.

By analysing our carbon footprint, we have identified the key areas where we can make the most significant improvement. This self-assessment has highlighted both opportunities and challenges in our journey towards sustainability, and it has underscored the importance of making informed decisions to reduce our emission.

Our commitment goes beyond just identifying areas for improvement; we are taking concrete steps to reduce our environmental impact. We are exploring renewable energy sources, implementing energy-efficient practices, and seeking ways to optimise our resource use across the business. Additionally, we are working closely with our suppliers to encourage sustainable practices and ensure that our entire supply chain is aligned with our carbon reduction goals.

We recognise that reducing our carbon footprint is not a one-time effort but a continuous process that requires dedication and innovation. As we move forward, we will regularly assess and refine our approach, setting clear targets and measuring our progress along the way. Transparency and accountability will be at the heart of our efforts, and we are committed to sharing updates with our stakeholders as we work towards achieving our sustainability goals.

Ben Francis, Managing Director
